## Useful Pages

# wiki wiki

Wiki wiki is the first Hawai'ian term I learned on my first visit to the airport counter agent directed me to take the wiki wiki bus because I said what? He explained that wiki wiki meant quick. I was to find I did pick up a book about the language before my return home. I learned many things from this but wiki wiki is the word that sticks.

## Many wiki's

MediaWiki is the name of the software that this wiki is running on. But MediaWiki is not the only wiki out there, there are many more wiki software projects: Dokuwiki, Tiddly Wiki, Zim wiki, etc: [https://en.wikipedia.org/wiki/List\\_of\\_wiki\\_software](https://en.wikipedia.org/wiki/List_of_wiki_software)

The syntax to insert an image:

```
[[File:myimage.png|My caption]]
```

Captions can be added to images by using a vertical bar (the "pipe"):

```
[[File:myimage.jpg|Caption under the image]]
```

## Youtube/Vimeo videos

To include, you need:

- the ID of the video you want to include in your page
- to write  `{{youtube|id}}` for Youtube or  `{{vimeo|id}}` for vimeo. Where the  `id` is the sequence of numbers and letters that follow `?v=` in Youtube videos url, and `vimeo.com/` in Vimeo videos)

For example:  `{{youtube|A1YYv\_J2csk}}` or  `{{vimeo|68841788}}`

## Changing pages' titles

Pages' titles can be changed by using the function **Move** in the top right corner in a dropdown menu next to the star.

The Move page permits you to attribute a new name to the current page

audio.

and a caption, if you to say something about that image, video, or the file name of the file you are going to upload (they must match) **To upload** you can use the picture icon on the menu. It asks you for

video ogv, webm, mp 4

audio ogg, mp 3

image png, gif, jpg, jpeg, svg

## Medium Formats

Wiki allows the following formats:

and video on the pages you'll be developing.

You probably want not only to write, but also to use images, audio

## Uploading images

## Audio Visuals

of the page. For example: `User:Peggy/notes` .

this by adding a slash (/) behind your user page, and write the name

You can also make **subpages** within your user space, you can do

page.

have a more private place to write pages, you can do it in your user user pages are not indexed by search machines, so if you want to

a link to a User page looks like this: `User:Peggy`

User pages have their own (so called) namespace. This means, that

Some starting points:

Alexa (Rank).

Wikipedia is now the fifth most visited website according to Wikiquote and Wiktionary, are descended from it. Edited by any person. All other wikis, including Wikipedia and WikiLeaks are descending from it.

This website is the first ever "wiki", where content can be replaced its text with the word "delete".  
Wikisandbox if you want to experiment with how editing works. If you make a page you don't want to keep, just replace its text with the word "delete".  
Wikisandbox to try it yourself. Please use the Wikisandbox to find out how, and then go to the TextFormattingRules to find out how. Read the TextFormattingRules to find out how, and then go to the TextFormattingRules to try it yourself. Please use the TextFormattingRules to find out how. Anyone can change any page or create new pages. Read the TextFormattingRules to find out how, and then go to the TextFormattingRules to try it yourself. Please use the TextFormattingRules to find out how. The content is written by the users -- people like you and me.

Collaboration between its readers.

Large volume of material recording related discussions and home to an [InformalHistoryOfProgrammingIdeas](#) as well as a WardCunningham for the [PortlandPatternRepository](#). It is WardCunningham for the [PortlandPatternRepository](#). It is This website and the software it runs on were created by WardCunningham for the [PortlandPatternRepository](#). It is

Wiki Wiki Web

Who makes the software we are using?

Ward Cunningham made the Wiki Wiki Web, an early version of wiki software. This wiki hosted the "Portland Pattern Repository" and c2.com.

[Interview with him about the context of the Wiki Wiki Web](#)

The wiki was made for **speed and easiness of writing and publishing on the Web**. And to be **moving from read to write mode**. Also, the wiki was inspired by HyperCard (and HyperText).

Also important about wiki's was the mode of **collaboration** it allowed for. According to Ward Cunningham *People discovered that they can create something with other people, that they don't even know. But they come to trust and they make something that surprises them in terms of its value.*

## Software with an attitude

You're browsing a database with a program called Wiki Wiki Web. And the program has an attitude. The program wants everyone to be an author. So, the program slants in favor of authors at some inconvenience to readers.

Posted on the original "wiki", the [Portland Pattern Repository](#); sadly the original seems to no longer be online

## Mediawiki's genealogy

[Mediawiki](#) is the software that runs Wikipedia, and the PZI wikis.

## How to create a page?

If you want to write something about something for which there isn't a page, you create that page and start writing its content.

There are a few ways to make a page:

- write the pagename **in the url bar** directly
- create a page by clicking on an **internal link** [[name of new page]] for that page
- use the **search function** with the name of the page you want to create, if it does not exist you are given the possibility to create that page

**Note:** For your work you should use sub pages under your user namespace, see section below!

You can also make a link to **a page that does not exist yet**. These links will appear in red, and following this appearance, they are also called **red links**.

- **Red link** (non-existing page)
- **Blue** (existing page)

## User pages

Click on your name in the top right to go to your own **user page**.

::double indentation ( . . . and so on )

;term : definition

[ [File:Image-name.jpg|thumb|frame|Caption  
text] ]

{ {youtube|id} } (for including a youtube  
video)

{ {vimeo|id} } (for including a vimeo video)

{ {Transcluded page name} }

{ {Template name} } (call to template)

#REDIRECT [[Page name]]
